## Descripción

Created for people who want to experiment with photography, the Canon EOS 8.2 MP camera is a flexible portable body only. You will be able to select the quantity of storage in the camera as this Canon EOS 20D features a flash memory card slot. High-quality pictures and superb performance are yours with this Canon EOS digital SLR camera.

With its black body, the Canon EOS 8.2 MP camera is a refined device for taking pictures. As this Canon EOS 20D comes with rechargeable Lithium-ion batteries, you will be able to always be prepared to preserve your life's great moments. A higher number of megapixels means you can crop and enlarge your photos without causing pixelation. Show off the captured moments of your life and send them to family and friends with the 1.8-inch LCD monitor included with the Canon EOS 8.2 MP camera.

This Canon EOS 20D includes only the body and no lens. Selecting the most appropriate interchangeable lens or lenses based on your photography needs is one upside to buying the camera body alone. A battery charger and lithium ion battery are also included with this camera body. This camera had a BRAND NEW SHUTTER installed in December, and a full cleaning was performed! This will extend the working life of the camera by several years. The body has a few cosmetic cuffs/scratches, but is completely perfectly functioning, including all buttons, metering, focus and exposure settings.
